# Investigating the **Synonyms** of **Conversational Agents** to Aid Cross- Disciplinary CA Research

**Lu Wang, Chaomei Chen, and Jina Huh-Yoo**

College of Computing & Informatics, Drexel University, Philadelphia, PA, US

# Motivation

Designing conversational agents (CAs) involves cross-disciplinary efforts.

However, the **divergence of vocabulary on CAs** brings challenges in researching the full landscape of CA literature and sharing cross-disciplinary knowledge.

- relational agent\*
- chatbot\*
- talkative bot\*
- animated agent\*
- text-based agent\*
- conversational interface\*
- virtual assistant\*
- conversational agent\*
- personal assistant\*
- virtual human\*
- chatterbot\*
- dialogue/dialog system\*
- intelligent agent\*
- digital assistant\*
- virtual agent\*
- conversational humanoid\*
- natural language interface\*

# Overview of Project

**RQ1: What are the different terms** used to refer to the same underlying concept of conversational agents?

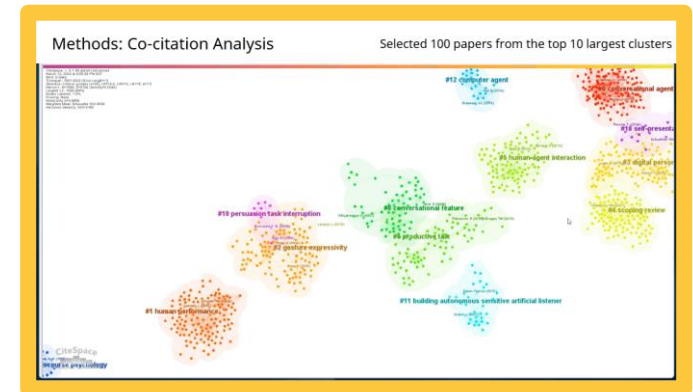

**RQ2: How do terms on CA and their usage differ** depending on their design characteristics and research areas?

Collected **5,047 papers** from Web of Science Core Collection with a search query *conversation\* agent\** in all fields.

Identified **1,591 cited papers** forming **222 clusters** through a co-citation analysis with CiteSpace software.

Extracted **54 CA-terms** from selected **100 papers** through stratified sampling method from the top ten largest clusters.

Examined usages of CA-terms in terms of **5 design characteristics** and **20 research areas**

Methods: CA-terms Identification Excluded 6 books and reviewed 94 papers

Criteria	Author-defined Terms:	Examples	
OR	(1-1) The authors mentioned the terms as synonyms of CA in their publications.	[Term A], also known as [Term B], [Term C], and [Term D].	
	(1-2) The authors of review papers used the terms as search queries.	(conversational OR virtual) AND (agent* OR assistant*)	
AND	Additional Terms: (used interchangeably without clear definitions)	Excluded Terms, e.g.,	Reasons
	(2-1) be machine entity.	human-robot interaction	emphasizes on "interaction", not machine entities
	(2-2) interact with users.	multi-agent system	interactions between machines or systems, not with users
(2-3) use natural languages as inputs and outputs.	sensitive artificial listener	focuses on non-verbal behaviors, not natural languages	

71 papers included CA-terms and we extracted **54 CA-terms** finally.

Methods: Usages Examination

A qualitative coding process

- Selected relevant statements from the introduction and related work section (quotes) and labeled them as a category of design characteristics of research (code).  One researcher
- Participated in discussion sessions to identify categories that could be merged, renamed, or removed, and finally organized the categories by 5 design characteristics of CAs:  Two researchers  
(1) text-based, (2) voice-based, (3) non-verbal, (4) capable of being social (e.g., personalities and emotional intelligence with the ability to recognize and display emotions), and (5) remembering each user's data.

---

A quantitative mapping process

- We extracted the research area labels of the 71 papers from Web of Science and mapped the areas to the terms used by calculating the frequencies of the paper's research areas if the terms were used in the paper.
- One paper could have multiple research area labels. Finally, the terms with the highest frequencies would be the most used terms.

# Methods: Co-citation Analysis

Selected 100 papers from the top 10 largest clusters

CiteSpace, v. 6.1.R6 (64-bit) Advanced  
March 13, 2023 at 8:55:39 PM EDT

Harmonic Mean(Q, S)=0.9185

# Methods: CA-terms Identification

Excluded 6 books and reviewed 94 papers

Author-defined Terms:		Examples	
OR	(1-1) The authors mentioned the terms as synonyms of CA in their publications.	<i>[Term A], also known as [Term B], [Term C], and [Term D].</i>	
	(1-2) The authors of review papers used the terms as search queries.	<i>(conversational OR virtual) AND (agent* OR assistant*)</i>	
Criteria	Additional Terms: (used interchangeably without clear definitions)	Excluded Terms, e.g.,	Reasons
	(2-1) be machine entity.	<i>human-robot interaction</i>	emphasizes on “interaction”, not machine entities
	(2-2) interact with users.	<i>multi-agent system</i>	interactions between machines or systems, not with users
	(2-3) use natural languages as inputs and outputs.	<i>sensitive artificial listener</i>	focuses on non-verbal behaviors, not natural languages

71 papers included CA-terms and we extracted **54 CA-terms** finally.

# Methods: Usages Examination

## A qualitative coding process

1. Selected relevant statements from the introduction and related work section (quotes) and labeled them as a category of design characteristics of research (code).

One researcher

2. Participated in discussion sessions to identify categories that could be merged, renamed, or removed, and finally organized the categories by 5 design characteristics of CAs:

Two researchers

(1) text-based, (2) voice-based, (3) non-verbal, (4) capable of being social (e.g., personalities and emotional intelligence with the ability to recognize and display emotions), and (5) remembering each user's data.

---

## A quantitative mapping process

1. We extracted the research area labels of the 71 papers from Web of Science and mapped the areas to the terms used by calculating the frequencies of the paper's research areas if the terms were used in the paper.
2. One paper could have multiple research area labels. Finally, the terms with the highest frequencies would be the most used terms.

# Results and Conclusions

**RQ1: What are the different terms used to refer to the same underlying concept of conversational agents?**

**RQ2: How do terms on CA and their usage differ depending on their design characteristics and research areas?**

## Future Work:

Results: 54 CA-terms

12 different ending words

* system: 2 terms	* interface: 7 terms	* software: 1 term	* bot: 9 terms
* agent: 16 terms	* assistant: 4 terms	* butler: 2 terms	* human: 3 terms
* character: 5 terms	* avatar: 2 terms	* partner: 1 term	* companion: 2 terms

On January 10, 2022, we collected 5,047 papers from Web of Science Core Collection with a search query **conversation\* agent\*** in all fields.

We identified 54 CA-terms and collected 519,513 papers on March 2, 2022, with a **combined search query** for all fields.

Terms included with the "OR" operator as a search query for the data collection:

```
conversation* agent* virtual agent* chat agent* assistant agent* artificial agent* autonomous agent* communicative agent* dialogue agent* digital agent* embodied agent* intelligent agent* interface agent* relational agent* social agent* synthetic agent* tool-based agent* conversational* assistant* digital assistant* personal assistant* virtual assistant* digital butler* virtual butler* embodied human* virtual human* conversational* human* virtual companion* digital companion* virtual avatar* embodied avatar* agent character* virtual character* assistant character* conversational character* embodied character* tool bot* chat robot* chatbot* social robot* chatbotbot* chatbotbot* virtual conversational partner* dialog system* conversational system* conversational agent interface* conversational interface* conversational* embedded interface* natural language interface* voice user interface* natural language user interface* human language interface* conversational* full body software
```

Results: CA-terms according to the CA Design Characteristics

Text	Voice	Non-verbal behavior	Being social	Remembering users' data	
●	○	○	○	○	text-based *, e.g. Messenger, Slack, Telegram
●	●	○	○	○	chatbot/chat bots/chatbot/chatbot/assistant
○	●	○	○	○	voice */spoken *, e.g. AT&T's How May I Help You
●	○	●	○	○	conversational agent*/ assistant*/ butler, e.g. Siri
○	○	●	●	○	synthetic artificial intelligence/agent (excluded)
●	○	○	○	○	embodied / (animated) */ multimodal */ human*/ character/ avatar/ synthetic agent, e.g. SamSara
○	○	○	●	○	social bot
○	○	○	○	○	social agent
●	○	○	○	○	relational agent
○	○	○	○	○	* companion

Terms were used to refer to any kinds of CAs: dialog/dialogue/conversational system, conversational/human language/natural language interface

Results: Disciplinary Differences on CA-term Use

Research Area	including 704 terms	The Most used CA-Terms within the area based on 71 influential papers
Computer Science	46	① conversational agent*, ② virtual agent*, ③ dialog/dialoging system*, ④ chatbot*, ⑤ virtual human*
Engineering	28	① conversational agent*, ② dialog/dialoging system*, ③ virtual agent*, ④ assistant agent*, ⑤ chatbot*
Psychology	19	① chatbot*, ② conversational agent*, ③ assistant agent*, ④ dialog*
Health Care Sciences & Services	19	① conversational agent*, ② chatbot*, ③ dialog/dialoging system*, ④ conversational interface*
Medical Informatics	19	① conversational agent*, ② chatbot*, ③ dialog/dialoging system*, ④ conversational interface*
Linguistics	7	① conversational agent*, ② chatbot*, ③ conversational interface*, ④ virtual assistant*, ⑤ conversational humanoid*, ⑥ personal assistant*, ⑦ digital assistant*
Operations Research & Management Science	5	① conversational agent*, ② chatbot*, ③ virtual agent*, ④ relational agent*, ⑤ virtual avatar*
Psychiatry	5	① conversational agent*, ② chatbot*, ③ conversational interface*, ④ virtual assistant*, ⑤ tool-based agent*
Autistics	4	① conversational agent*, ② virtual agent*, ③ dialog/dialoging system*, ④ inclusive bot*
Education & Educational Research	4	① conversational agent*, ② dialog/dialoging system*, ③ intelligent agent*, ④ natural language interface*
Information Science & Library Science	3	① conversational agent*, ② dialog/dialoging system*, ③ chatbot*
Public, Environmental & Occupational Health	3	① conversational agent*, ② dialog/dialoging system*, ③ relational agent*
Social Sciences - Other Topics	3	① conversational agent*, ② dialog/dialoging system*, ③ relational agent*
Automation & Control Systems	2	① dialog/dialoging system*, ② virtual human*
Robotics	2	① dialog/dialoging system*, ② virtual human*
Communication	1	① conversational agent*
Genetics & Genomics	1	① conversational agent*
Mathematics	1	① conversational humanoid*
Medicine	1	① conversational agent*
Telecommunication	1	① virtual agent*

# Results: 54 CA-terms

12 different ending words

* system: 2 terms	* interface: 7 terms	* software: 1 term	* bot: 9 terms
* agent: 16 terms	* assistant: 4 terms	* butler: 2 terms	* human: 3 terms
